

FinEdge – Personal Finance & Expense Tracker API

Overview:

Build a RESTful API backend for a personal finance tracker using **Node.js** and **Express**, demonstrating asynchronous programming, modular architecture, and clean REST design. Users can create accounts, add income or expenses, view summaries, and generate monthly insights.

Learning Objectives

Students will:

- Understand Node.js runtime and event loop
- Build APIs using Express.js
- Implement CRUD routes and modular architecture
- Use middleware, async/await, and error handling
- Apply REST best practices
- Work with JSON-based data persistence or MongoDB (optional)
- Follow clean code and separation of concerns

Expected Project Structure

```
src/  
├── app.js  
├── routes/  
│   ├── userRoutes.js  
│   └── transactionRoutes.js  
├── controllers/  
│   ├── userController.js  
│   └── transactionController.js  
├── services/  
│   ├── userService.js  
│   └── transactionService.js  
└── models/
```

Member-Wise Module Allocation

Member	Module	Key Deliverables
1	User APIs	User routes and controller
2	Transaction APIs	Transaction module implementation
3	Middleware & Utils	Error handling, validation, and logging
4	Analytics & Documentation	Summary logic and Postman collection
